AK BINARY BOOGIE HOOK INSTRUCTIONS

July 15, 2019

Thank you and congratulations on your new AK Binary Trigger System!

Most will drop right in and work, most will need some tuning to make the timing correct.

Below are the instructions to do so. ☺ *

Please note that you will need original Full Auto fire control group. Any country of origin will work, for the most part. If you do not have a FA FCG, Apex or Arms of America carry them.

1) Measure 21mm from the top of your receiver down and make a mark on your receiver where the travel mark from your safety is (figure 1).

Figure 1

2) Using a dremel with two cutoff wheels or a ¼” drill, indent your receiver so your safety selector will catch at this point. This locks the disconnector into place (figure 2).

Figure 2

3) Install system into your AK without the disconnector (figure 3). The longer arm on the rate reducer spring goes up (figure 3).

Figure 3

4) Holding the trigger back in the “fired” position, draw the hammer back until it locks into position (figure 4).

Figure 4

5)

Release the trigger to send it home. If the hammer catches on the trigger, you will have to shave a little off of the hammer. GO SLOW. Repeat step 4 until the hammer clears the trigger upon release. See figures 5 and 6.

Figure 5 BEFORE MATERIAL REMOVAL OF HAMMER

Figure 6

AFTER REMOVAL OF HAMMER MATERIAL

6) Re-install your disconnector and re-test.
7) Install your safety selector. If your safety selector ill not fit in, you will have to remove a small amount of material in the corner. Please see figures 7 and 8.

Figure 7

Figure 8

If you are in binary firing mode and wish to switch to safe mode, you must hold in the trigger, switch your safety selector to the “SAFE” position, rack/charge the bolt carrier so the disconnector will engage the hammer, thus rendering the firearm into “SAFE” mode.
